## PROFILE

Software engineer and SFSU graduate student with strong Python/Java backend experience and hands-on Linux/Docker operations. Built full-stack services and SQL-backed APIs, plus agentic LLM systems (LangChain/ADK), including crypto risk analysis workflows. Focused on shipping reliable, maintainable products from prototype to production.

## EMPLOYMENT

**QubeMC LLC | San Francisco, CA** **Jun 2020 – Present**
Founder & Lead Developer

- Built and operated a production hosting + software services business; owned full lifecycle across development, infrastructure, and support; generated recurring revenue ($100+/month) while balancing delivery with operations.
- Developed customer-facing web services and internal tooling, integrating backend APIs with Linux-based deployment environments.
- Provisioned and administered dedicated Linux servers; automated deployment/maintenance and implemented security hardening (access controls, firewall configuration).
- Diagnosed production issues and shipped fixes to improve reliability and customer experience; provided ongoing support to maintain service continuity.

**Episcopal Church of the Incarnation | San Francisco, CA** **Aug 2024 – Present**
Website Manager (Part-time)

- Manage and maintain multiple WordPress sites; ship content updates, bug fixes, and UI improvements using HTML/CSS.
- Implement accessibility and usability enhancements (structure, navigation, readability) to improve the experience for a broad community.
- Built an LLM-driven translation pipeline using OpenAI Agent Builder and workflow automation to streamline weekly bilingual publishing and reduce manual effort.
- Prototyped a LangChain-based email management workflow to automate outbound messages and subscription handling.

## PROJECTS

**Crypto Risk Analysis Agent — Production Agents Hackathon (Best Use of TRM Labs, 1st Place)**

- Built a full-stack agent system integrating TRM APIs + external data sources to evaluate token risk signals and generate an investment risk summary.
- Deployed MCP services via Docker to stabilize API integrations and unblock team collaboration under hackathon deadlines.

## ACADEMIC EXPERIENCE

**ECOLE Lab, SFSU | Research Assistant | Sep 2024 – Present —** Build NLP/LLM evaluation + data analysis workflows for AI-assisted text simplification.
**SFSU | Instructional Support Assistant | Sep 2025 – Dec 2025** — Built lightweight computational demos/tools; supported instruction.
**University of California, Santa Cruz | Santa Cruz, CA** **Sep 2022 – Jun 2023**
Research Assistant

- Built a reproducible CV pipeline for ultrasound speech research (Python, Anaconda), automating workflow execution and multimodal data synchronization.
- Integrated DeepLabCut + AAA for CNN-based tongue-contour tracking; implemented Whisper + LLM-assisted post-processing to streamline labeling; presented at LURC.

## EDUCATION

**San Francisco State University (SFSU)** — M.A. Linguistics (Computational Ling), *Expected Sep 2026* | San Francisco, CA
**University of California, Santa Cruz (UCSC)** — B.A. Linguistics, *Jun 2024* | Santa Cruz, CA

## AWARDS

**Best Use of TRM Labs — 1st Place**, Production Agents Hackathon (Nov 2025) — Crypto Risk Analysis Agent
**REAL Agent Challenge (Agent Track) — 2nd Place**, AGI Inc. x OpenAI x Lovable Hackathon (Dec 2025) — Browser Agent
**Frontegg Sponsor Prize (Best Use of FrontMCP) — 1st Place**, Self-Evolving Agents Hackathon (Nov 2025) — YouTube Agent

## SKILLS

- Python, Java, JavaScript, C; SQL (PostgreSQL/MySQL/SQLite); Flask; Linux, Docker; Git/GitHub; PyTorch, scikit-learn, TensorFlow/Keras; pandas/NumPy; LangChain/Google ADK; spaCy/NLTK; English/Mandarin/Cantonese (Spanish–Intermediate)
